The UC Davis Washington Program gives students from any major the opportunity to live, learn, and intern in the nation's capital. You’ll live in the heart of DC in the UC Washington Center, with undergraduates from each of the UC campuses. Together, you will spend one academic quarter in residence taking credit-bearing courses tailored to the Washington experience, participating in internships, and exploring the area’s rich educational, cultural, historical and social activities.

Courses are designed to link the Washington experience to your discipline: sample topics include Science Policy, Museum Studies, Foreign Policy, Washington Media, and Public Management.

Our students report that the Washington Program has helped them identify their career paths by exposing them to new options within their disciplines, and giving them valuable work experience and a professional network that could lead to future opportunities.

We prepare each participant personally and professionally for the internship experience. You will work closely with advisors to develop a competitive portfolio, and attend professional development workshops to help you perfect your interviewing skills, secure an internship, and understand the professional environment of Washington DC.

Genetics major Lyndzie Sardenga had a wealth of lab experiences on campus with the UC Davis Mouse Biology program and in the Vogel Laboratory for Environmental and Molecular Toxicology. But she wasn’t exposed the public policy side of scientific research until her internship in Washington DC, where she found a perfect match in the Genetic Alliance.

“It’s incredibly important to bridge the gap between healthcare and science policy. People at Genetic Alliance share the exact same passions I have.”

UC Davis Washington Program

Find Your Future

The UCDC program fueled my passions and gave me the summer of a lifetime.

JENNIFER BOYER ’15
Intern at: American Council on Renewable Energy
Major: Environmental Sciences

The internship solidified my plans to pursue a career in cyber policy.

KAMAAL THOMAS ’16
Intern at: The U.S. Department of Homeland Security
Major: International Relations and Economics

We prepare each participant personally and professionally for the internship experience. You will work closely with advisors to develop a competitive portfolio, and attend professional development workshops to help you perfect your interviewing skills, secure an internship, and understand the professional environment of Washington DC.
Summer Program — 10 weeks

- **Non-Credit Option:** students participate exclusively in the internship, working 4–5 days per week (32–40 hours). While there is no enrollment fee, students do not earn academic credit but do receive transcript notation. Financial aid cannot be applied to this program option.

- **Credit Option:** students enroll in a 4 unit elective course in addition to working at an 8 unit internship for credit.

You must check with your major advisor to ensure that the courses you choose can be applied to your graduation requirements. Each department has a different procedure for petitioning major/minor credit for DC coursework, so we encourage you to talk with an academic advisor early in the planning process.

Academic Year Program — 11 Weeks

- **Internship - 8 units:** students work 3–4 days per week (24–32 hours), leaving time for academic work.

- **Core Research Seminar - 4 units:** students enroll in one upper division core seminar designed to put the internship in an academic framework.

- **Optional Elective - 4 units:** students may choose from electives taught by faculty and local experts. Most meet one evening a week at the UCDC building.

You will continue to earn credit and be registered full-time at UC Davis during your quarter-in-residence (except for the summer non-credit option). Financial Aid may be available for students registered full-time.

Learn From Amazing Teachers

Imagine a class where a U.S. Supreme Court Justice is your guest instructor, giving an intimate Q & A to you and your classmates. Washington Program courses are taught by visiting UC professors, UCDC instructors and Washington area leaders, experts, and special guests such as Justice Anthony Kennedy, pictured above, who taught a class on the Constitution. Small classes give students close access to professors and an interactive learning environment.

Awaken a Passion You Never Knew You Had

The internship is the heart of the Washington Program. You’ll have the opportunity to make real contributions in a work environment where people share your passions and interests. Students in all majors develop professional skills while gaining experience with experts in their fields and building valuable career connections.

Explore a Variety of Career Interests

Working in the nation’s capital allows you to explore a variety of career interests, occupations, and work environments. Internships are available at private, non-profit, international, and government agencies. With hundreds of possibilities, internships in Washington can open doors to professional opportunities you can’t find on campus.
